## Change your nameservers

Pointing to Cloudflare's nameservers is critical for activating your site successfully. Otherwise, Cloudflare is unable to manage your DNS and optimize your site.

### 1. Log in to your [GoDaddy account](#)

Remove these nameservers:

ns-1956.awsdns-52.co.uk

ns-1320.awsdns-37.org

ns-863.awsdns-43.net

ns-326.awsdns-40.com

### 2. Replace with Cloudflare's nameservers:

Nameserver 1

karina.ns.cloudflare.com

[Click to copy](#)

Nameserver 2

will.ns.cloudflare.com

[Click to copy](#)

Check to make sure they're correct, then **Save your changes**.

Registrars typically process nameserver updates within 24 hours. Once this process completes, Cloudflare confirms your site activation via email.
